The Anthropology of Parliaments Emma Crewe 2021-05-14 *The Anthropology of Parliaments* offers a fresh, comparative approach to analysing parliaments and democratic politics, drawing together rare ethnographic work by anthropologists and politics scholars from around the world. Crewe's insights deepen our understanding of the complexity of political institutions. She reveals how elected politicians navigate relationships by forging alliances and thwarting opponents; how parliamentary buildings are constructed as sites of work, debate and the nation in miniature; and how politicians and officials engage with hierarchies, continuity and change. This book also proposes how to study parliaments through an anthropological lens while in conversation with other disciplines. The dive into ethnographies from across Africa, the Americas, Asia, Europe, the Middle East and the Pacific Region demolishes hackneyed geo-political categories and culminates in a new comparative theory about the contradictions in everyday political work. This important book will be of interest to anyone studying parliaments but especially those in the disciplines of

anthropology and sociology; politics, legal and development studies; and international relations. **Forensic Anthropology Laboratory Manual** Steven N. Physical Anthropology Philip L. Stein 2020 "What is new in the twelfth edition? Physical anthropology is a dynamic field. We have updated the entire book on the basis of new information. This is seen most clearly in the chapters on human genetics (Chapters 2 and 3). In the last several years, our knowledge of human genetics has increased enormously. We reorganized, rewrote, and streamlined Chapters 2 and 3 to reflect the new information in genetics that was relevant to physical anthropology. Other areas of significant revision were the chapters on the fossil record of human evolution (Chapters 12 to 15). Again, we included new information that has been published in recent years, but not all of that information. The fact that new information and ideas are published does not necessarily mean that the significant findings and concepts are immediately known. So, we did not include every new finding and idea in this edition. An example of why we choose not to include everything might be made clear with something that happened just as the 10th edition of this book was being prepared, a 47-million-year-old fossil, *Darwinius massillae*, which was nicknamed 'Ida,' was touted as 'the missing link' in human evolution. The Internet and print media were full of claims and speculation, much of which either was not true or played on the public's misunderstanding of evolution, especially the misconception of a 'missing link.' Ida has little significance to the understanding of human evolution. We hope that after students complete a course in Physical Anthropology, they will recognize illogical or factually incorrect statements made in the name of evolutionary theory in the popular media"--

Forensic Archaeology W. J. Mike Groen 2015-02-17 Forensic archaeology is mostly defined as the use of archaeological methods and principles within a legal context. However, such a definition only covers one aspect of forensic archaeology and misses the full potential this discipline has to offer. This volume is unique in that it contains 57 chapters from experienced forensic archaeological practitioners working in different countries, intergovernmental organisations or NGO's. It shows that the practice of forensic archaeology varies worldwide as a result of diverse

historical, educational, legal and judicial backgrounds. The chapters in this volume will be an invaluable reference to (forensic) archaeologists, forensic anthropologists, humanitarian and human rights workers, forensic scientists, police officers, professionals working in criminal justice systems and all other individuals who are interested in the potential forensic archaeology has to offer at scenes of crime or places of incident. This volume promotes the development of forensic archaeology worldwide. In addition, it proposes an interpretative framework that is grounded in archaeological theory and methodology, integrating affiliated behavioural and forensic sciences. Cultural Anthropology: 101 Jack David Eller 2015-02-11 This concise and accessible introduction establishes the relevance of cultural anthropology for the modern world through an integrated, ethnographically informed approach. The book develops readers' understanding and engagement by addressing key issues such as: What it means to be human The key characteristics of culture as a concept Relocation and dislocation of peoples The conflict between political, social and ethnic boundaries The concept of economic anthropology *Cultural Anthropology: 101* includes case studies from both classic and contemporary ethnography, as well as a comprehensive bibliography and index. It is an essential guide for students approaching this fascinating field for the first time.

Law's Anthropology Paul Burke 2011-11-01 Anthropologists have been appearing as key expert witnesses in native title claims for over 20 years. Until now, however, there has been no theoretically-informed, detailed investigation of how the expert testimony of anthropologists is formed and how it is received by judges. This book examines the structure and habitus of both the field of anthropology and the juridical field and how they have interacted in four cases, including the original hearing in the Mabo case. The analysis of background material has been

supplemented by interviews with the key protagonists in each case. This allows the reader a unique, insider's perspective of the courtroom drama that unfolds in each case. The book asks, given the available ethnographic research, how will the anthropologist reconstruct it in a way that is relevant to the legal doctrine of native title when that doctrine gives a wide leeway for interpretation on the critical questions.

The Existence Or Non-existence of Race? Conrad B. Quintyn 2010 In this book, Conrad Quintyn details the two intransigent sides of the race issue in biological anthropology and human biology in order to propose a common-sense compromise. This compromise is interesting because it does not derive from academic armchair philosophy. It takes into account practical issues in the social environment. This book is significant to the field, at this time, because it addresses the following issues, which form the basis for discussing the future of racial classification in America: 1) There is a high frequency of admixture in U.S. population caused by the steady flow of immigrants over the years, resulting in multiracial populations. Hundreds of thousands of these multiracial Americans are demanding visibility, acceptance and in many cases an identity that is separate from black or white; 2) Officials in federal and state agencies as well as black and Hispanic political activists worry that allowing people to choose more than one race, or eliminating race altogether, would impact civil rights compliance and educational accountability for students by race and ethnicity; distribution of federal aid to minorities; and minority districting in congressional elections. It might also erode black or Hispanic solidarity and confuse law enforcement, since the FBI, state, and local police depend on race for much of their day-to-day work; and 3) Population admixture has increased the difficulty in determining race using the skull, which has implications for human identification in forensic science. Quintyn analyzes several critical arguments posed by both sides and propose a practical compromise which is integral to the future of racial classification in America. First, from the racialists perspective, they ask if there is no such thing as race, what would it look like if it existed? Furthermore, if the premise is accepted that there are no biological races, and there is much compelling evidence presented in the literature, then how is it that a person of European ancestry is easily distinguished from a person of African or Asian ancestry? In this book which brings us closer to answering these questions, Quintyn begins with a history of the race argument, with an emphasis on biological anthropology, to give the reader some critical background information. He gives in chronological order several biological definitions of race before discussing its meaning in contemporary society, and touches on race and medicine. In concluding his study, unlike current books on race, he argues that the academic consensus that there is no such thing as race is ultimately pointless.

The Property Species Bart J. Wilson 2020 "What is property, and why does our species happen to have it? In *The Property Species*, Bart Wilson explores how *Homo sapiens* acquires, perceives, and knows the custom of property, and why it might be relevant for understanding how property works in the twenty-first century. Arguing from some hard-to-dispute facts that neither the natural sciences nor the humanities - nor the social sciences squarely in the middle - are synthesizing a full account of property, Wilson offers a cross-disciplinary compromise that is sure to be controversial: All human beings and only human beings have property in things, and at its core, property rests on custom, not rights. Such an alternative to conventional thinking contends that the origins of property lie not in food, mates, territory, or land, but in the very human act of creating, with symbolic thought, something new that did not previously exist. Integrating cognitive linguistics with the philosophy of property and a fresh look at property disputes in the common law, Wilson makes the case that symbolic-thinking humans locate the meaning of property within a thing. The provocative implications are that property - not property rights - is an inherent fundamental principle of economics, and that legal realists and the bundle of sticks metaphor are wrong about the facts regarding property. Written by an economist who marvels at the natural history of humankind, the book is essential reading for experts and any reader who has wondered why people claim things as "Mine!", and what that means for our humanity. Biological Anthropology Craig Britton Stanford 2013 This textbook presents a survey of physical anthropology, the branch of anthropology that studies the physical development of the human species. It plays an important part in the study of human origins and in the analysis and identification of human remains for legal purposes. The authors use the progressive term "biological anthropology" to mean "an integrative combination of information from the fossil record and the human skeleton, genetics of individuals and of populations, our primate relatives, human adaptation, and human behavior."

Digital Anthropology Heather A. Horst 2013-08-01 Anthropology has two main tasks: to understand what it is to be human and to examine how humanity is manifested differently in the diversity of culture. These tasks have gained new impetus from the extraordinary rise of the digital. This book brings together several key anthropologists working with digital culture to demonstrate just how productive an anthropological approach to the digital has already become.

Through a range of case studies from Facebook to Second Life to Google Earth, *Digital Anthropology* explores how human and digital can be defined in relation to one another, from avatars and disability; cultural differences in how we use social networking sites or practise religion; the practical consequences of the digital for politics, museums, design, space and development to new online world and gaming communities. The book also explores the moral universe of the digital, from new anxieties to open-source ideals. *Digital Anthropology* reveals how only the intense scrutiny of ethnography can overturn assumptions about the impact of digital culture and reveal its profound consequences for everyday life. Combining the clarity of a textbook with an engaging style which conveys a passion for these new frontiers of enquiry, this book is essential reading for students and scholars of anthropology, media studies, communication studies, cultural studies and sociology.
